

SmartSoftKey Custom Services

SmartSoftKey, Inc. develops and sells complete, secure, automated methods for software protection and digital rights management.

When working with a client, SmartSoftKey's first goal is to understand the complete scope of the project. Once a client's needs have been identified, SmartSoftKey works closely with the client to design an appropriate project to address those needs.

SmartSoftKey offers complete solutions for software, document, email, CD, and DVD security. SmartSoftKey also provides solutions for software consulting, including porting and development of new applications on a variety of platforms.

SmartSoftKey works with its clients to recommend the most economical and timely solutions for their security needs and software programming needs. When project specifications are frozen at the initiation of a project, SmartSoftKey works on a fixed-cost basis for each task. SmartSoftKey also undertakes projects involving tasks of an exploratory nature, where specifications and costs of each task are flexible as work progresses.

SmartSoftKey's qualified and experienced personnel have expertise on various platforms and operating systems, such as UNIX, Windows 98/2000/XP/NT, Macintosh OS, etc. This expertise includes the design and development of solutions around different Database Systems, such as Microsoft SQL Server 6.0 and up, Sybase SQL Server system 10 and up, Oracle RDBMS on UNIX and X-Windows environment.
